OPAQUE FINISH AWARENESS AGREEMENT

Thank you for choosing an opaque finish from Homecrest Cabinetry. Because your satisfaction is important to us, we want you to be aware of the unique characteristics of painted finishes that may be quite different from other cabinetry finishes.

Characteristics of Opaque Finishes

Opaque finishes are different from standard wood finishes. On all wood products, expansion and contraction are typical due to changes in climate conditions. Due to this normal movement, opaque finishes may develop slight separation lines, finish breaks and seam lines. These will be most notable at stile, rail and panel joints. Joint separations may become more noticeable over time and through season changes.

All MDF and wood opaque finishes first receive a primer coat designed to provide optimum fill and leveling of the surface. This provides an even base for the color and finish coats.

Seam lines and finish breaks are normal characteristics of opaque finishes and should not be considered a reason for product replacement. Over time, there may be a slight color shift in the finish, due to exposure to natural and artificial light.

Example of door front joint separation

Example of door front joint separation

Example of door end joint separation

I have read and understand the statements above and agree that the characteristics of opaque finishes from Homecrest Cabinetry are acceptable. I understand that neither Homecrest Cabinetry or the Homecrest Cabinetry Dealer listed below is responsible in the event that these characteristics are later found to be less desirable than expected.
