

TEAM ACKNOWLEDGEMENTS

There are people behind the scenes of every project, without whom the endeavor could not come to fruition. First, our deepest gratitude goes out to the mistletoe practitioners and researchers who explored this therapy long before us. The deep spiritual collaboration between Dr. Rudolf Steiner and Ita Wegman, MD in the early 1900s gave birth to the anthroposophic approach to medicine and to *Viscum album* (European mistletoe) therapy. Their vision to bridge science and the deeper mysteries of healing has inspired thousands of doctors and therapists all over the world. We also remember Rita Leroi MD, one of the founders and the Chief Physician of the former Lucas Klinik (now Klinik Arlesheim). Dr. Leroi was a great teacher to a generation of doctors to follow.

Our coauthor team will be forever grateful to the past President and CEO of SteinerBooks, Gene Gollogly (1950–2021), whose encouragement, enthusiasm, and support for this project pushed us all forward to finish the book. We are equally grateful to Maurice Orange, MD (1953–2021). Dr. Orange was a modern pioneer of mistletoe therapy and a great mentor of many doctors around the world including the coauthors Steven Johnson, DO and Mark Hancock, MD. Marion Debus, MD was also a close colleague of Dr. Orange, and both of them inspired Dr. Johnson to organize the mistletoe and integrative oncology training course that led to the development of this book.

We also want to thank the nonprofit organization Believe Big and its founder Ivelisse Paige for working so hard to fund the recent mistletoe research trial at the Sidney Kimmel Comprehensive Cancer Center at Johns Hopkins. Believe Big educates the public about mistletoe therapy and helps make mistletoe available to patients who are held

back by cost. It is also important to acknowledge the lead investigators of the Johns Hopkins mistletoe trials: Luiz Diaz, MD and Channing Paller, MD. We are grateful to have such scientific leaders turn their curiosity toward the potential benefits of mistletoe therapy. A special thank you goes to coauthors Nasha Winters, ND, FABNO and Peter Hinderberger, MD, who supported Believe Big's efforts and helped develop the first Johns Hopkins mistletoe trial. This Johns Hopkins trial has gleaned significant public attention. But this is not the first time U.S. researchers have investigated mistletoe. That ground-breaking honor belongs to Patrick Mansky, MD, one of the first mistletoe researchers in the U.S. Dr. Mansky's research led to further academic investigations as well as clinical interest in mistletoe. We thank Philip Incao, MD and Paul Scharff, MD. Their pioneering work as well as so many others in the U.S. and around the world deserves to be mentioned. They laid the foundations for mistletoe therapy to gain the recognition it has today.

We want to acknowledge the Physicians' Association for Anthroposophic Medicine (PAAM), which donated many resources to the training and mentoring courses for doctors across the country. Thank you to PAAM's coordinator Amanda Jacobs who was often behind the scenes, organizing these initiatives. We acknowledge the hard work and constant encouragement of Kirin Buckley (a mistletoe therapy patient and cancer survivor herself), who kept pushing us forward and coordinated so many of the book's puzzle pieces: seven authors, an editor, multiple donors, and the publisher.

We offer a special thank you to Anika Hanisch who provided invaluable guidance and crucial insights into the organization, flow, and writing of the manuscript. We thank Kristen Dorn for her expertise with graphic design and Pamela Askins for organizing our final steps as we polished the manuscript for the publisher and for providing draft feedback. Several other friends and colleagues read drafts and provided needed feedback during the editing process, including: Donna DeRosa, Sandragail Dunn, RN, Eileen R. Hosking, Cindy
